

M365 Governance Framework

From data protection and compliance to user management and security, our framework has got you covered.

A Microsoft 365 Governance Framework is a critical component of effective M365 management. It provides a structured approach to managing and controlling the various aspects of M365, including security, compliance, access management, and usage policies.

This ensures that organisations are meeting relevant regulatory requirements and protecting sensitive information. The framework also provides guidelines for managing third-party apps and integrations, which can help reduce the risk of data breaches or security incidents.

What's covered?

Discovery Workshop

A **free** one-day workshop with a Spanish Point senior practice lead. This will involve your key business and/or technology owners to identify your specific governance needs, evaluate your current governance practices, and identify any gaps or areas for improvement.

Based on these findings, we will recommend a governance framework that aligns with your organisation's goals and objectives.

Governance Framework

This includes services such as project planning, formation of a governance committee, policy and procedure development, technical implementation, configuration of Microsoft 365 governance features, definition and implementation of governance controls, testing and refinement, development of training and communication materials, creation of a customized governance manual, and rollout and adoption support.

Typical Price

€6,825

Excluding VAT

Spanish Point combines Microsoft best practice, global research and our own experience with customers across a wide range of commercial and public sector to design and implement your Microsoft 365 Governance Framework.

Our SMART Workplace solution is both a proven design process for your organisation's information architecture, governance templates for Microsoft Team sites, together with a library of previously developed software components for common business scenarios not natively available in Microsoft 365.
